

Preface

The information system is a complex system including data collecting, storing, processing and delivering. The main components of information systems are computer hardware and software, telecommunications, databases and data warehouses, human resources, and procedures. With the development of the information system, the innovation technologies and their applications continuously appear, such as the Internet of Things (IOT), cloud computing, big data and smart cities.

2013 International Conference on Information Systems and Computing Technology (ISCT 2013) was held in Wuxi, Jiangsu Province, China. 2014 International Conference on Information Systems and Computing Technology (ISCT 2014) was held in Tottori University, Japan. Now, the 3rd International Conference on Information Systems and Computing Technology (ISCT 2015) will be held in Shanghai, China. ISCT 2015 aims to bring together researchers, scientists, engineers, and scholar students to exchange and share their experiences, new ideas, and research results, and discuss the practical challenges encountered and the solutions adopted.

We thank the Wuxi Innovation Center of Shanghai Institute of Technical Physics of the Chinese Academic of Sciences and School of Information Engineering of Huzhou University. And also thank the Secretariat of the organizing committee and others for any help. Last but not least, we would like to express our deep gratitude to all authors, reviewers for their excellent work.
